

The Kenchester

The Kenchester is designed to be under 4m to the ridge and as such can often be built without planning permission (subject to a number location, we are happy to advise further). The cat slide roof ensures the ridge height is kept low whilst retaining adequate depth for parking of most modern cars.

Built to the high standards you would expect from Oakwrights Country Buildings, the Kenchester is a simple traditional oak framed car port that provides a cost effective building and yet can be the starting point for a more bespoke garage project.

Full Assembly by our Expert Team
